MOUNTING INSTRUCTION

 **for Golf III, Vento and Corrado!**

In certain cases, the assignment of the front axle struts can vary due to the introduction of technical changes. At all events, steps must be taken to establish whether the vehicle in question is equipped with **base axle** or **plus axle**.

The difference between the two is explained below:

base axle: The strut top insulator, located on the spring tower and visible when the bonnet is open, is covered by a plastic cap. The top insulator has no reinforcing ribs.

plus axle: The top insulator is not covered. It has star shaped reinforcing ribs. When fitting the Bilstein spring sets, the upper spring seat

VW-ET-No. 1 HO 412 341

is to be used. The spring seat

VW-ET-No. 357 412 341 A

fitted to the vehicle is not required.
